

## TEC TALKS TECH

We take a confusing tangle of technology that no one understands and simplify it. Make it orderly. Effective. Guaranteed.

# DETANGLING THE WORLD OF STRUCTURED CABLING.

## FOUR KEY QUESTIONS:

1

### WHAT BENEFITS DO WE EXPECT?

Think about things like conference calling, data security, always-on performance, and preparing for future growth.

2

### WHAT DO WE NEED?

This is a functional question. How many desks need telephones? Ethernet ports? How many people will be using wifi at once? And so on.

3

### WHAT DO WE WANT?

Maybe it's a connected TV in every conference room? Or security cameras with AI built-in? What are the most advanced office solutions you can dream of? A good cabling partner will brainstorm with you, working with your floor plan to determine what's possible.

4

### WHAT'S WRONG WITH OUR CURRENT SYSTEM?

What do your employees or customers complain about now? You should plan to fix those problems, and mine them for insights about the ways your employees are working.
